

LiftTrax[®]

Inspection and Maintenance Planning Program

LiftTechTM introduces LiftTrax[®], a systematic single-source approach to planned maintenance inspections to increase safety and reduce liability.

LiftTrax is a multi-point inspection and maintenance planning program for material handling equipment, supported by expert personnel and advanced technology.

LiftTrax provides support through:

- Equipment identification and classification
- Evaluation of equipment and conditions
- Historical reporting of equipment deficiencies
- Recommendations for preventative maintenance
- Compliance with applicable industry standards
- Professional engineers, certified inspectors, qualified technicians and expert consultation

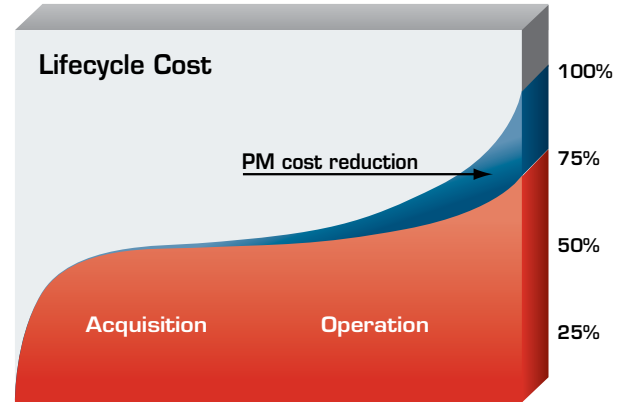

Make LiftTrax® Your Plan For Cost Savings!

An investment in LiftTrax increases equipment reliability and safety while reducing unnecessary downtime and costs due to premature equipment failure. Increase uptime and improve equipment lifecycles with LiftTrax's proactive management approach to preventative maintenance. Customers can reduce equipment lifecycle costs up to 25% with the utilization of LiftTrax inspection and maintenance management programs. LiftTech will help you track your spending against expectations relating to equipment reliability and cost savings.

**ABOVE THE
HOOK**
**BELOW THE
HOOK**
**ON THE
GROUND**

LiftTech makes it easy! With the LiftTrax inspection program, facility managers can rely on one-source for planned inspection services covering a complete range of equipment and devices.

- **Above-the-hook:** Cranes and crane components
- **Below-the-hook:** Mechanical and magnetic lifting devices
- **On-the-ground:** Surface mounted and mobile equipment

By extending service life and minimizing downtime, LiftTech preventative maintenance services can reduce equipment lifecycle costs by as much as 25%.

Avoid OSHA Penalties!

LiftTrax visual inspections are tailored to your applications to ensure compliance with OSHA regulatory requirements. It's not just a good idea... it's the law! Scheduled on-site inspections by qualified inspectors accompanied by detailed reports minimize liability and risk of penalties.

Control Maintenance Costs!

Up to 30% of the lifecycle cost for lifting devices can be attributed to maintenance and repairs. The costs of unplanned downtime are even higher. The LiftTrax program is designed to eliminate emergency service and repairs by allowing operators to integrate preventative maintenance with your scheduled shutdowns. The result is more efficient planning, increased uptime and longer equipment service life.

Improve Maintenance Planning!

All LiftTrax inspection reports are compiled in LiftTech's database to facilitate easy long-term scheduling and reporting. Our engineers evaluate the maintenance of your equipment and are available to consult with you personally to develop the most efficient service plan for your operation.

On request, LiftTrax inspectors will also coordinate with LiftTech Field Service technicians to complete any on-site maintenance or repairs recommended in your service plan.

Complete Field Inspection Services

- Visual Inspection
- Ultrasonic Testing
- Magnetic Particle
- Liquid Penetrant
- Radiography
- Hardness Testing

Customers rely on LiftTech where safety and reliability count:

- Alternative Energy
- Equipment Dealers
- Oil & Gas
- Scrap & Recycling
- Transportation
- Automotive
- Manufacturing
- Port Authorities
- Shipbuilding
- Warehousing
- Construction
- Metal Producers
- Pulp & Paper
- Steel Service
- Waste Handling

Accredited end-to-end service

LiftTech personnel are certified and/or adhere to all applicable industry standards.
